SUMMARY

Software Engineer with 3 years of experience in building scalable systems. Master's in Computer Science. Proficient in Java, Node.js, TypeScript, Javascript and Python, with expertise in databases (PostgreSQL, MongoDB), cloud services (AWS, Azure), microservices, Kubernetes, and passionate about contributing to products for internal teams.

EDUCATION

CALIFORNIA STATE UNIVERSITY, SAN BERNARDINO | M.S in Computer Science | GPA: 3.9/4.0 Aug 2023 - May 2025
Courses: Analysis of Algorithms, Distributed Systems, Machine Learning, AI, Database Systems, Advanced Operating Systems

PANIMALAR INSTITUTE OF TECHNOLOGY | Bachelor of Engineering in Computer Science | CGPA: 8.2/10 Aug 2016 - May 2020
Courses: Algorithms, Data Structures, Operating Systems, Cloud Computing, Compilers, Web Technologies

SKILLS

Languages, Runtimes, & Frameworks:	NodeJs, TypeScript, Java, Python, Scripting (Shell, Bash), React, Express
Data Management & Core Principles:	Redis, Kafka, MongoDB, PostgreSQL, MinIO, Data Structures, OOP
Cloud, Orchestration, and Version Control:	Docker & Kubernetes, AWS & Azure, Git, Github Actions
Core Competency:	Agile/Scrum, Problem-Solving, Detail-Oriented, Strong Teamwork, Communication

EXPERIENCE

YELLOW.AI | Software Development Engineer | Bangalore, India Nov 2021 - Aug 2023

- Developed a **Node.js** and **TypeScript** backend for no-code conversation designer, transforming design mockups into functional flows for self service customers, reducing development time by ~40% ensuring backward compatibility
- Built a conversation log management feature with **MinIO**, **Docker** and **Kubernetes** using TTL to support ~10M concurrent conversations, enabling conversation history analysis and faster debugging for customers and support teams
- Led migration to **TypeScript OOP** microservice from legacy functional programming, using **Redis** and **unleash feature flags**, achieving a ~50% reduction in response times, production issues and improving architectural clarity
- Engineered a LLM microservice using **TypeScript**, **MongoDB** to securely manage customer model data, parameters, tokens, and invocations, with centralized usage monitoring, improving observability by 30%
- Optimized performance with **Kubernetes Horizontal Pod Scaling**, handling **critical system alerts** and production bugs, updating documentation, and configuring test suites, reducing manual testing effort by 30% as an on-call engineer

KHATABUDDY | Freelance Software Development Engineer | Remote, India Jun 2022 - Oct 2022

- Implemented a **React** interface with a **Node.js/Express** backend to display invoices and generate dynamic reports using **PostgreSQL** data in under a minute
- Devised a **React** dashboard for tracking balance sheets, ledgers, inventory management helping secure early customers

YELLOW.AI | Software Engineer | Bangalore, India Aug 2020 - Oct 2021

- Automated customer interactions by developing and deploying NLP-driven chatbots using **Node.js** and **Python**, enabling seamless end-user engagement and reducing operational costs by 60%
- Devised a data application with **Python** and **Streamlit** to analyze app.yellow.ai's codebase, helping leaders to make informed decisions **80% faster** and supporting the transition to cloud.yellow.ai platform

NOTABLE PROJECTS

Agentic Information Retrieval – OctoRag | github.com/gowthamkishore3799/OctoRag Feb 2025 - Mar 2025

- Developed an agentic RAG system with Python, Gradio, ijson to analyze 3.2M GitHub repos dataset for complex queries
- Implemented tools as Gitingest, ArangoDB queries, and NetworkX algorithms, leveraging Langchain with memory for context, ijson to address large-scale data handling
- Achieved a 90% accuracy in retrieving relevant repository information, evaluating accuracy and response time

GitIngest (OpenSource) | github.com/cyclotruc/gitingest Dec 2024 - Jan 2025

- Resolved branch parsing issues using **Python** subprocesses to fetch remote URLs, ensuring accurate repository retrieval
- Engineered a test suite for CLI and web interfaces, minimizing parsing failures and increasing test coverage by 10%

Azure SQL & Serverless Integration | github.com/SE-Team-4-2024/azure_db_functions Feb 2024 - Mar 2024

- Led backend development in a 14-member team for a class project mobile game by designing and deploying a secure SQL database on Azure with optimized schema, indexing, and modular CRUD operations to improve performance
- Built a CRUD wrapper in C# and deployed using Azure Serverless Functions, integrating with a Unity frontend for scalable game architecture, contributing to a first-place win for the game
