Education

California State University | Master of Science in Computer Science (MScS) | GPA: 3.91/4.0 May 2025

- **Coursework:** Machine Learning, AI, Data Structures, Software Engineering, Algorithms, Database Systems

Panimalar Institute of Technology | Bachelor of Engineering in Computer Science | GPA: 3.2/4.0 May 2020

- **Coursework:** Algorithms, Data Structures, Operating Systems, Cloud Computing, Distributed Systems

Skills

- **Backend Technologies:** Node JS, Python, Go, TypeScript, JavaScript, Express, Redis, MongoDB, SQL, PostgreSQL
- **Data Pipelines & Cloud Platforms:** Kafka, RabbitMQ, gRPC, AWS, Azure
- **CI/CD Ecosystem:** Docker, Kubernetes, Jenkins, GIT, Github Actions

Experience

Yellow.ai | Software Development Engineer | Bangalore, India November 2021 - August 2023

- Spearheaded the creation of a no-code designer for natural text and voice conversation flows; led technical discussions to establish a TypeScript framework supporting backward compatibility. Reduced time-to-market by 50%, driving \$130K in annual recurring revenue (ARR) and enabling seamless integration of LLMs and in-house models.
- Formulated migration plan and contributed to "executor-cloud" microservice using TypeScript and OOP, routing traffic from legacy to new service, improving response times, improving concurrency and reducing production issues.
- Contributed to the development of various microservices, including those for message processing, data storage, and job scheduling, using **Node.js**, **Javascript** and **Express** supporting conversational design, user profiling. Deployed on AWS and Azure, which boosted customer engagement by 60% and drove \$30 billion in revenue.
- Developed the "prompt-service" microservice to integrate various LLM models based on customer needs, with usage metrics, token tracking, rate-limiting, and alerts. Simulated and tested LLM behavior to optimize model selection and ensure seamless integration. Collaborated on CI/CD pipeline setup and implemented robust microservice

Khatabuddy | Freelance Software Engineer | Bangalore, India June 2022 – November 2022

- Collaborated in designing and engineering a user-friendly frontend dashboard using React.js and a backend distributed system with **Node.js** and **MongoDB**, built from scratch for the startup. Managed financial records, generated real-time reports, and maintained an inventory dashboard.
- Enabled dynamic invoice creation using open-source libraries, reducing setup time to under 30 seconds.
- Devised a monitoring platform that delivers detailed metrics on transactions, including billing, invoice generation, digital payment collections, and profit and loss over time.

Yellow.ai | Software Engineer | Bangalore, India August 2020 – October 2021

- Designed, implemented, and deployed NLP-driven conversational AI solutions to automate tasks, enhance customer engagement using technologies of **Node JS**, **Python**, **Express**, **Redis**, **MongoDB** which helped the businesses to increase their quality of customer service and reduce operational costs by **60%**.
- Integrated multiple third-party systems with the conversation AI solution using **Node.js**, resulting in a productivity boost of up to 50% for agents.
- Engineered a data application using Python and Streamlit, providing in-depth analysis of the codebase in app.yellow.ai, which informed key decisions and supported the transition to the low-code platform cloud.ai.

Projects

GitIngest | github.com/cyclotruc/gitingest/ January 2025

- Resolved critical GitHub repository branch parsing challenges by implementing a robust solution that handles special characters, enabling seamless branch list fetching and repository downloads across diverse system environments.
- Enhanced branch parsing reliability and overall system stability by developing a comprehensive test suite, including targeted tests for CLI and web interfaces, reducing parsing failures and improving repository management.

ML Model Implementation | github.com/gowthamkishore3799/ml-model-implementation September 2024

- Developed and fine-tuned machine learning models, including a phishing email classifier (98% accuracy), customer segmentation (91%), and fashion image classification (94%) using Random Forest, Logistic Regression, K-Means, DBSCAN, GMM, CNNs, TensorFlow, and Keras.
- Applied scikit-learn for feature selection, model evaluation, and hyperparameter tuning, utilizing optimization techniques to ensure optimal performance and accuracy.

Live Streaming Service | github.com/gowthamkishore3799/live-streaming December 2024

- Engineered backend infrastructure for a live streaming service using Go and HLS, ensuring low-latency streaming and robust video processing, while gaining a deeper understanding of video streaming technologies.
