EDUCATION

California State University | Master of Science in Computer Science (MScS) | GPA: 3.91/4.0 May 2025

Relevant Courses: Machine Learning, AI, Data Structures, Compiler Design, Database Systems, Operating System

Panimalar Institute of Technology | Bachelor of Engineering in Computer Science | GPA: 3.2/4.0 May 2020

Relevant Courses: Algorithms, Data Structures, Operating Systems, Cloud Computing, Distributed Systems

SKILLS

- **Languages, Runtimes, & Frameworks:** Node.js, Python, Go, TypeScript, React, Express, REST APIs
- **Data Management & Core Principles:** Redis, NoSQL (MongoDB), SQL, PostgreSQL, Data Structures, OOP
- **Cloud & Orchestration:** Docker & Kubernetes, AWS & Azure
- **Core Competency:** Agile/Scrum Methodologies, Problem Solving, Attention to Detail, Team Collaboration, Continuous Learning

EXPERIENCE

YELLOW.AI | Software Development Engineer | Bangalore, India November 2021 - August 2023

- Developed a **no-code conversation designer in TypeScript** that transforms design mockups into functional chat and voice flows while ensuring backward compatibility which reduced development time by 50% and drove \$130K in ARR.
- Implemented a multi-LLM integration microservice using **TypeScript**, adding rate-limiting, tracking usage, and setting up alerts, generating \$130,000 in ARR from tool access.
- Created and executed a migration plan to route traffic to a new microservice using **Node.js** and **TypeScript**, enhancing observability, response times, and concurrency, reducing maintenance efforts and production issues by 50%.
- Contributed to various microservices for message processing, flow building, storage, and user profiling etc with **Node.js**, **Express**, **Kafka**, and **RabbitMQ**. Deployed on AWS and Azure with Kubernetes, boosting engagement by 60% and driving \$30B in revenue.
- Provided on-call support, optimizing application performance through scalability improvements, throughput enhancements, HPA setup, and adding ad-hoc features from Jira to enable quick turnaround for production issues.

KHATABUDDY | Freelance Software Engineer | Bangalore, India June 2022 – November 2022

- Collaborated in designing and developing web pages with React.js and a backend distributed system using **Node.js** and **PostgreSQL**, improving financial record management, enabling real-time reporting, and streamlining inventory tracking.
- Devised a monitoring platform using **React** and **Node.js**, providing a comprehensive view of transactions, billing, invoice generation, and inventory management, leading to the acquisition of the first set of customers.

YELLOW.AI | Software Engineer | Bangalore, India August 2020 – October 2021

- Designed, built, and deployed NLP-driven AI solutions to automate tasks using **Node.js**, **Python**, **Express**, **Redis**, and **MongoDB**, helping businesses improve customer service and reduce costs by 60%, enabling businesses to scale efficiently and improve overall customer satisfaction.
- Integrated third-party payment, CRM, and agent systems using Node.js, resulting in a productivity boost of up to 50% for agents.
- Built a data application with Python and **Streamlit** to analyze app.yellow.ai's codebase, helping leaders to make informed decisions 80% faster and supporting the transition to cloud.ai.

PROJECTS

GITINGEST | github.com/cyclotruc/gitingest/ January 2025

- Fixed GitHub repository branch parsing issues utilizing **Python** by handling special characters, ensuring smooth branch fetching with improved accuracy and reliability of branch handling.
- Developing a comprehensive test suite, including targeted tests for CLI and web interfaces, reducing parsing failures and improving repository management.

ML MODEL IMPLEMENTATION | github.com/gowthamkishore3799/ml-model-implementation September 2024

- Developed and fine-tuned machine learning models, including a phishing email classifier (98% accuracy), customer segmentation (91%), and fashion image classification (94%) using Random Forest, Logistic Regression, K-Means, DBSCAN, GMM, CNNs, TensorFlow, and Keras.
- Applied scikit-learn for feature selection, model evaluation, and hyperparameter tuning, using optimization techniques to ensure optimal performance and accuracy.

LIVE STREAMING BACKEND | github.com/gowthamkishore3799/live-streaming December 2024

- Engineered backend infrastructure for a live streaming service using **Go** and **HLS**, ensuring low-latency streaming and robust video processing, for gaining a deeper understanding of video streaming technologies.
