Education

California State University | Master of Science in Computer Science (MScS) | GPA: 3.91/4.0 May 2025

- **Coursework:** Machine Learning, AI, Data Structures, Software Engineering, Algorithms, Database Systems

Panimalar Institute of Technology | Bachelor of Engineering in Computer Science | GPA: 3.2/4.0 May 2020

- **Coursework:** Algorithms, Data Structures, Operating Systems, Cloud Computing, Distributed Systems

Skills

- **Backend Technologies:** Node JS, Python, Go, TypeScript, JavaScript, Express, Redis, MongoDB, SQL, PostgreSQL
- **Data Pipelines & Cloud Platforms:** Kafka, RabbitMQ, gRPC, AWS, Azure
- **CI/CD Ecosystem:** Docker, Kubernetes, Jenkins, GIT, Github Actions

Experience

Yellow.ai | Software Development Engineer | Bangalore, India November 2021 - August 2023

- Spearheaded the creation of a no-code designer for natural text and voice conversation flows; led technical discussions to establish a TypeScript framework supporting backward compatibility. Reduced time-to-market by 50%, driving \$130K in annual recurring revenue (ARR) and enabling seamless integration of LLMs and in-house models.
- Formulated migration plan and contributed to "executor-cloud" microservice using TypeScript and OOP, routing traffic from legacy to new service, improving response times and reducing production issues.
- Contributed to message processing, storage, and delivery features for Yellow.ai's core microservices, supporting conversational design and user profiling for \$30B in annual revenue. Automated scalable REST APIs and background workers (**Express, Node.js, Redis**), enabling large-scale AI marketing tests and boosting customer engagement by **60%**.
- Developed the "prompt-service" microservice to integrate various LLM models based on customer needs, with usage metrics, token tracking, and rate-limiting, alerts. Collaborated on CI/CD pipeline setup and microservice monitoring.

Khatabuddy | Freelance Software Engineer | Bangalore, India June 2022 – November 2022

- Collaborated in designing and engineering a user-friendly frontend dashboard using React.js and a backend distributed system with **Node.js and MongoDB**, built from scratch for the startup. Managed financial records, generated real-time reports, and maintained an inventory dashboard.
- Enabled dynamic invoice creation using open-source libraries, reducing setup time to under 30 seconds.
- Devised a monitoring platform that delivers detailed metrics on transactions, including billing, invoice generation, digital payment collections, and profit and loss over time.

Yellow.ai | Software Engineer | Bangalore, India August 2020 – October 2021

- Designed, implemented, and deployed NLP-driven conversational AI solutions to automate tasks, enhance customer engagement using technologies of **Node JS, Python, Express, Redis, MongoDB** which helped the businesses to increase their quality of customer service and reduce operational costs by **60%**.
- Integrated multiple third-party systems with the conversation AI platform, including Zendesk, using Node JS which boosted agent productivity by up to **50%**.
- Configured a monitoring solution for conversational AI components using Python and Streamlit, enabling data analysis that influenced the decision to build cloud.yellow.ai. This low-code approach facilitated a smooth transition from app.yellow.ai, which generated **\$30B** in revenue and is projected for continued growth.

Projects

ML Model Implementation | github.com/gowthamkishore3799/ml-model-implementation September 2024

- Developed and deployed multiple machine learning models, including a phishing email classifier using Random Forest, Logistic Regression (98% accuracy).
- Built customer segmentation models with K-Means, DBSCAN, and GMM, achieving 91% accuracy.
- Created a fashion image classification model using CNNs with TensorFlow and Keras, achieving 94% accuracy.
- Applied scikit-learn for feature selection, model evaluation, and hyperparameter tuning to ensure optimal performance and accuracy.

Live Streaming Service | github.com/gowthamkishore3799/live-streaming December 2024

- Engineered the backend infrastructure for a live streaming service using Go and HLS, ensuring low-latency streaming and robust video processing, while gaining a deeper understanding of video streaming technologies and their underlying mechanisms.
- **Integrated cloud storage (AWS S3)** for efficient video segment management and delivery, optimizing the streaming experience for end users.
