SUMMARY

Current Master's student in Computer and Information Science with **3+ years** of experience in building scalable systems using Go, Python, TypeScript, REST APIs, cloud services, and databases

EDUCATION

CALIFORNIA STATE UNIVERSITY, SAN BERNARDINO | M.S in Computer Science | GPA: 3.9/4.0 May 2025 (Expected)

Courses: Machine Learning, AI, Data Structures, Distributed Systems, Database Systems, Operating System

PANIMALAR INSTITUTE OF TECHNOLOGY | Bachelor of Engineering in Computer Science | GPA: 3.2/4.0

May 2020

Courses: Algorithms, Data Structures, Operating Systems, Cloud Computing, Cloud Computing

SKILLS

Languages, Runtimes, & Frameworks:	NodeJs, TypeScript, Go/GoLang, Python, Scripting (Shell, Bash), React, Express, REST API
Data Management & Core Principles:	Redis, Kafka, NoSQL (MongoDB), SQL, PostgreSQL, Data Structures, OOP
Cloud, Orchestration, and Version Control:	Docker & Kubernetes, AWS & Azure, Git, Github Actions
Core Competency:	Agile/Scrum, Problem-Solving, Detail-Oriented, Strong Teamwork, Communication

EXPERIENCE

YELLOW.AI | Software Development Engineer | Bangalore, India November 2021 – August 2023

- Developed a no-code conversation designer in TypeScript that converts design mockups into functional chat and voice flows, reducing development time by **40%**
- Led the migration plan to route traffic from legacy to new codebase utilizing Kubernetes feature gates, improving observability and response times while reducing maintenance efforts and production issues by **50%**
- Implemented a multi-LLM integration framework using TypeScript, adding rate-limiting, tracking usage, and setting up alerts, generating **\$130K** in ARR from tool access
- Contributed to the development of various microservices for messaging, flow building, storage, user profiling and other capabilities using **Node.js, Express, Kafka** on **AWS/Azure** with Kubernetes, which boosted engagement by 60% and drove \$30M in revenue
- Worked as an on-call engineer, optimizing performance through scalability, throughput, HPA setup, production bug fixes, documentation, and test suite configuration, reducing manual testing by 30%

KHATABUDDY | Software Development Engineer | Remote, India

June 2022 – November 2022

- Led frontend development with React.js and backend systems with Node.js, Express for managing inventory and dynamic invoice generation, reducing processing time by 50%
- Devised a dashboard using Node.js and React for tracking overall transactions and billing, contributing to the acquisition of the first set of customers

YELLOW.AI | Software Engineer | Bangalore, India

August 2020 – October 2021

- Automated tasks by building and deploying NLP-driven AI solutions using Node.js, Python, Express, Redis, and MongoDB, improving customer service and reducing operation costs by 60%
- Integrated third-party payment, CRM, and agent systems using Node.js, resulting in a productivity boost of up to 50% for agents
- Devised a data application with Python and Streamlit to analyze app.yellow.ai's codebase, helping leaders to make informed decisions 80% faster and supporting the transition to cloud.ai

PROJECTS

OCTORAG | github.com/gowthamkishore3799/OctoRag

March 2025

- Developed an agentic graph-based RAG (retrieval-augmented generation) from Github repository dataset (approximately 3.2 million repositories) using Langchain, NetworkX, and ArangoDB, enhancing information retrieval for complex queries, utilizing various tools for increased performance

GITINGEST (OpenSource) | github.com/cyclotruc/gitingest/

January 2025

- Contributed to an open-source project by resolving GitHub branch parsing issues, fetching remote branch URLs using Python subprocesses
- Engineered a test suite for CLI and web interfaces, minimizing parsing failures and increasing test coverage by 10%

ML MODEL IMPLEMENTATION | github.com/gowthamkishore3799/ml-model-implementation

September 2024

- Built machine learning models achieving 98% accuracy in phishing email classification, 91% in customer segmentation, and 94% in fashion image classification using TensorFlow and Keras
