SUMMARY

Senior Software Engineer building backend systems and AI developer tools, with experience in agentic code review, LLM evaluation, distributed services, and production infrastructure. Proficient in TypeScript, Python, Node.js, and React.

EXPERIENCE

Senior Software Engineer | CODERABBIT Aug 2026 - Present

- Built an **agentic code-review pipeline** to catch defects missed by baseline reviews, combining hypothesis generation, sandbox investigations, and reconciliation with configurable model routing; improved defect recall by **~50% over baseline in internal evaluations** and enabled ongoing model upgrades.
- Built **LLM evaluation workflows** to compare review quality and cost across models, using isolated model/effort sweeps, controlled replay routing, and workload metrics; scaled driver workers to increase concurrent evaluation capacity from **20 to 40 PRs**.
- Developed **product and work-taxonomy processing** to turn fragmented PR activity into delivery context, combining LLM proposals with deterministic graph validation, encrypted snapshots, and atomic publication; enabled internal views linking **product surfaces, initiatives, workstreams, and PRs**.

Software Engineer | CODERABBIT Sep 2025 - Jul 2026

- Developed an **architecture knowledge base** to give reviewers long-term repository memory, learning system structure and conventions from merged PRs and AST graphs; used validated incremental fact updates and drift tracking to keep architectural context current and reusable across reviews.
- Built **graph-aware review batching and Codebase Explorer integration** to preserve cross-file context, grouping related files using dependency and review-stack signals; launched exploration alongside independent static analysis, removing the tool-completion wait from the critical path while preserving review coverage.
- Mentored engineering interns to help them contribute to production projects, providing implementation guidance and engineering feedback during development.

Founding Engineer | KHATABUDDY (Startup| Part time) | Remote Jun 2024 - Nov 2024

- Built inventory and ledger workflows with React, Java MVC APIs, and role-based access; optimized PostgreSQL invoice queries through indexing and query restructuring, and added Prometheus monitoring for API health.

Software Development Engineer | YELLOW.AI | Bangalore, India Nov 2021 - Aug 2023

- Led backend development in **Node.js** and **TypeScript** for a conversation designer, enabling self-service customers to generate chat/voice flows from design mockups, reducing development time by ~20%
- Designed and deployed a multi-region conversation log management system using **React**, **Express** for **REST API**, **MinIO**, and **Kubernetes** on **AWS/Azure**, handling 10M+ sessions with TTL retention to enhance debugging and traceability
- Engineered a **React–Node.js** LLM feature with **MongoDB** and extending **IAM** roles to manage model configs, tokens, and metadata, invocations, enabling safe internal and customer application integrations, boosting goal completion
- Led microservice migration (**Functional Node.js** to **object-oriented TypeScript**), using Redis, Unleash, Strangler Fig pattern, reducing response times by ~25% and improved architectural clarity
- Engineered a **Kafka-driven** voice campaign system with backpressure and dynamic K8s scaling, reducing DB load and infra cost while handling 1M+ events

Software Engineer | YELLOW.AI | Bangalore, India Aug 2020 - Oct 2021

- Designed and deployed multiple NLP-driven automation using **Node.js** and **Python**, slashing operational costs by **60%**
- Devised a Python and Streamlit app to visualize customer automation workflows, ingesting data from 5 distributed databases, helping leaders accelerate decisions by 80% and enabling the transition to cloud.yellow.ai form app.yellow.ai

SKILLS

Languages, Runtimes, & Frameworks: Node.js, TypeScript, Java, Go, Python, Scripting (Shell, Bash), React, Express
Data Management & Core Principles: Redis, Kafka, MongoDB, PostgreSQL, MinIO, Data Structures, OOP
Cloud, Orchestration, Monitoring & DevOps: Docker & Kubernetes, AWS & Azure, Git, Github Actions, Prometheus

EDUCATION

CALIFORNIA STATE UNIVERSITY, SAN BERNARDINO | M.S in Computer Science | GPA: 3.9/4.0 Aug 2023 - May 2025

PANIMALAR INSTITUTE OF TECHNOLOGY | Bachelor of Engineering in Computer Science | CGPA: 8.2/10 Aug 2016 - May 2020
